

Routes across GEANT

used by eVLBI MkVs

RTT & % load	Equipment
— (Blue line)	STM-64 (10Gbps)
— (Red line)	STM-16 (2.5Gbps)
— (Black line)	Gigabit Ethernet
.....	Unknown
	8518 - Cisco 8518
	8500 - Cisco 8500
	15216 - Cisco 15216 EDFA
	15252 - Cisco 15252 DWDM
	M160 - Juniper M160
	T840 - Juniper T840
	1214XX - Cisco GSR 12400 series
	BD6808 - Extreme Black Diamond 6808

% load is approx daily high v

Arpad Szomoru

What do we do?

- **Correlators**
 - More capacity, new telescopes, development of AVN, new features, MeerKAT VLBI
- **Data recording/playback/transport**
 - Real time/near-real time, higher bandwidths, 2 and 4Gbps
- **Automated operations**
 - Get rid of disk shipping
 - Monitoring, automated fringe checking
 - Triggered observations, multi-messenger astronomy
 - Fringe checking for BlackHoleCam
- **Software**
 - User software, VLBI with CASA
 - CASA in Jupyter notebooks, containerisation
 - Simulations for BlackHoleCam
 - SCHED re-factoring
- **Time and frequency transfer**
 - SAT architect in SaDT consortium
 - Transfer over public networks: demo involving Wb, Dw, LOFAR, SURFNet

- Continued development of Jive5AB
 - Talk by Harro Verkouter
- Used expertise for creation of file transfer tool
 - Part of Cleopatra WP in Asterics
- FlexBuff recording expanding
 - Many new machines
 - Aim to move to all-2Gbps recording
 - CBD decision
 - 10 TB disks now in general use
 - SSDs still way too expensive....

- Massive expansion of SFXC hardware

Before

After

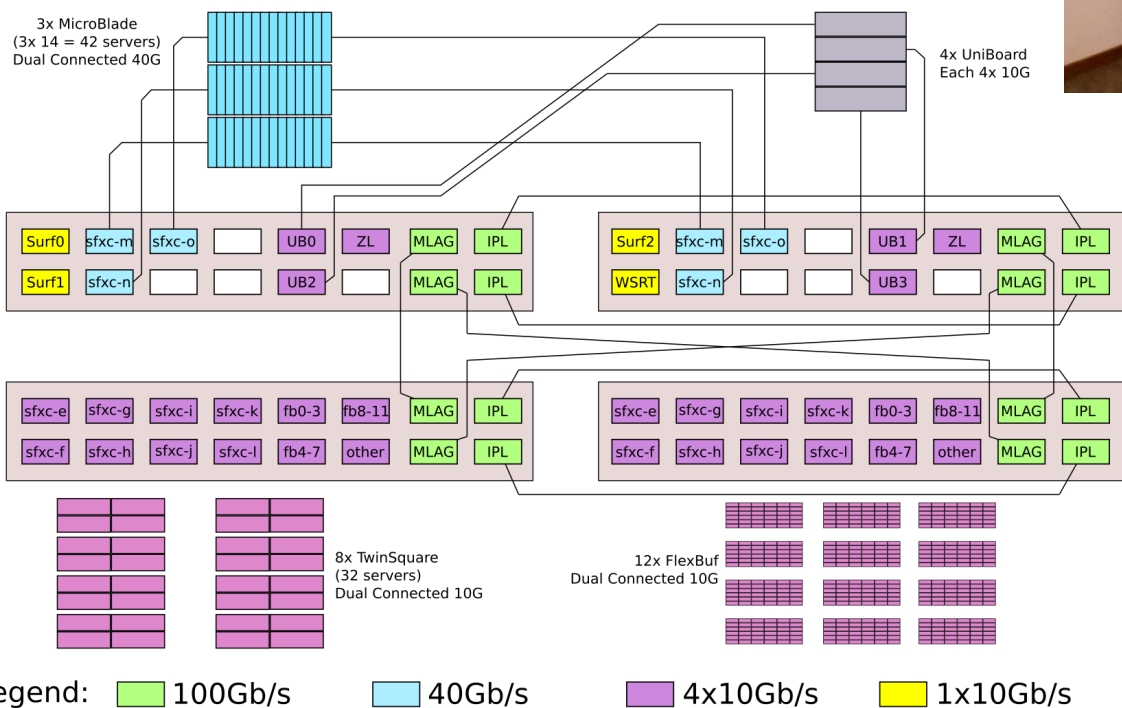

More...

- Complete overhaul of local network

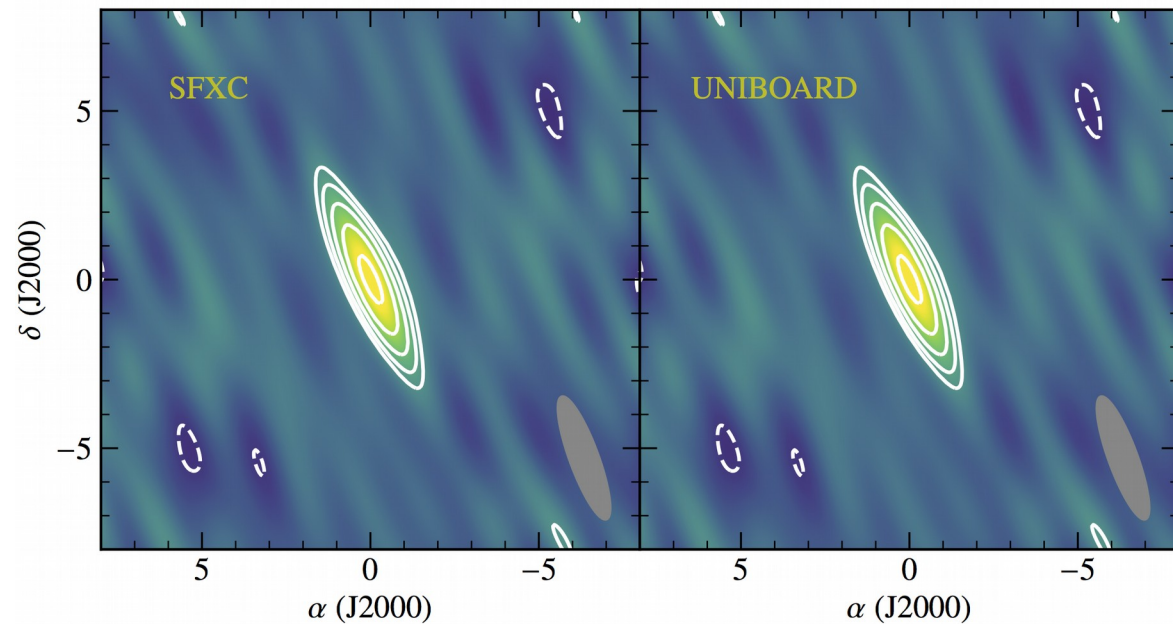

JIVE Network v5

- 2 Gbps e-VLBI operational
 - But what about 4 Gbps...?
- 2 KVAZAR stations recently tested again in e-VLBI mode
 - 1 Gbps per station
 - Although not (yet?) simultaneously
 - And now what?
- E-Merlin stations back in the fold
 - At least kind of
 - 1 bit went up to 2 bits, still some issues
 - But well done anyway!
- But, will e-VLBI with Merlin ever return?

- JUC tested for e-VLBI
 - Control software re-written, stable
 - Needs Fila10G in corner turning mode
 - Which means small packets of 1000B
 - Maybe 2000
 - Several real-time tests
 - Now testing final problems with DBBC simulator
 - As soon as simulator debugged
- Per board:
 - 32 stations at 64 MHz
 - Dual pol
- 4 boards: 16 stations at 4 Gbps
- Jonathan moved to ASTRON
 - Still 1 day/week at JIVE

- **CASA fringe fitting**
 - in RadioNet RINGS
 - Basic version in next (?) CASA release
 - New features in development branch
 - Mainly for BlackHoleCam folks
 - Dispersive fringe fitting for RINGS
 - Needed for BRAND
- Continued support for ParselTongue
- **OBELICS work package in ASTERICS**
 - Minimize re-calculation when changing parameters during data reduction of large data sets
 - Nice results with CASA in Jupyter
 - Containerised: docker and singularity
 - Generated much interest
 - Demonstration server set up

- SCHED re-factoring
- Using f2py to create Python main loop
 - All fortran routines appear as Python objects
 - But can add new Python functionality
- VEX2 writer done
- QT and Matplotlib available instead of PGPLOT
- Keyin reader re-written
- Allows the use of a templating language to generate and run KEYIN files
- Now working on a build system
 - Let the whole thing loose on our support scientists

- KAT7: prototype array for MeerKAT
- Not really maintained anymore, KAT4
- All efforts towards MeerKAT
- Still much interest in VLBI

- Harro has been analysing sample of KAT7 data
 - Pretty clear data is corrupted
 - Not worth trying new observations with KAT7

- New attempt, this time several scans with MeerKAT
 - 16 phased up dishes, also single dish
 - During recent NME
 - Now waiting for data to arrive

WP5 - CLEOPATRA: Connecting Locations of ESFRI Observatories and Partners in Astronomy for Timing and Real-time Alerts

- Led by JIVE
 - Time and frequency transfer
 - relaying alerts (warning system for transient events, also in EVN)
 - data streaming software (builds on Jive5ab experience)
 - advanced scheduling algorithms for complex, large arrays (mainly for SKA, CTA)
-
- Possible follow-up project: ESCAPE
 - Deals with European Open Science Cloud (EOSC)
 - ASTERICS partners + ESO, CERN, SKA
